

ENVIRONMENTAL POLICY

We protect the environment. We prioritise environmental protection when carrying out our activities, including pollution prevention, and consider the environmental impact of both transportation and TLT support activities. We do our best to provide modern and environmentally friendly solutions for passenger comfort and safety.

In implementing environmental principles, our main activities are as follows:

1. When planning our activities, we follow national and local environmental strategies and development plans;
2. We analyse the environmental impact of our activities and create initiatives;
3. We use resources such as water, electricity and fuel frugally and sustainably;
4. We procure environmentally friendly transport vehicles for both service provision and support activities;
5. We are gradually transitioning to fuel types that help reduce greenhouse gas emissions;
6. All purchased electricity required for our work is produced from renewable energy sources and by installing solar parks on rooftops, we create additional renewable energy sources ourselves.
7. We implement electronic solutions that improve work processes and help avoid or significantly reduce paper usage;
8. We develop and upgrade our infrastructures, as well as renovate existing buildings to increase energy efficiency;
9. We follow the requirements for environmentally friendly public procurement when carrying out procurements;
10. We ensure that the environmental permits required for the company's activities comply with current legislation;
11. We follow circular economy principles and our waste management is in line with the waste hierarchy and sectoral legislation;
12. We are influential in urban areas and use that to raise environmental awareness in society.
